M Series

Multivariable cable carrier
with extensive accessories and stay variants*

■ TÜV design approved in accordance
with 2PfG 1036/10.97**

Minimized hinge wear owing to the "life extending 2 disc principle"

Solid plate construction, enclosed impact system

Easy to assemble thanks to locking bolt with Allen screw

Replaceable glide shoes for long service life for gliding applications

WIDTH SECTIONS
1 mm

Stay variants

Frame stay RS

Standard design –
MC 0650 and 0950

For lightweight to medium loads.

Opening options:

Outside/Inside: the cable carrier can be opened quickly and easily simply by rotating the stays through 90°.

Frame stay RV

Reinforced design –
MC 0950 and 1250

For medium to heavy loads and for large chain widths.

Opening options:

Outside/Inside: the cable carrier can be opened quickly and easily simply by rotating the stays through 90°.

Frame stay RM

Solid design –
MC 0950 and 1250

Bolted, maximum stability,
maximum chain widths possible.

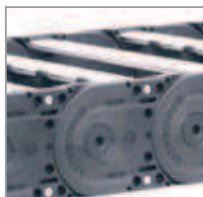

Frame stay RMF

Solid design
with optional fixing strip –
Standard for MC 1300

Opening options:

Outside/Inside: Stays easily screwed on. Stays can be removed quickly on both sides for laying cables.

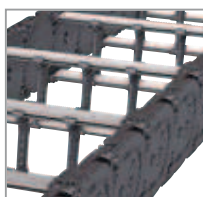

Frame stay RMS

Solid design
with ball joint – MC 1300

Opening options:

Outside/Inside: Stays with ball joint can be opened quickly and easily on both sides.

Stay arrangement

MC 0320 – Stays mounted on every chain link.

MC 0650, 0950, 1250 and 1300 –

Standard: on every 2nd chain link

Stays can be fitted on every chain link, please specify when placing your order.

Opening options MC 0320

Opening option 02: Detachable stays on the outside (standard)

Opening option 01: Detachable stays on the inside.

If you require opening variant 01, please state this when placing your order.

Additional stay variants:

Stay variant LG made of aluminum: Optimum cable guidance in the neutral bending line

Stay variant RMA: For very large cable diameters, such as e.g. with air hoses

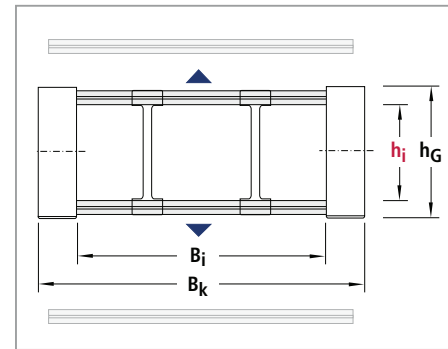

Stay variant RMR: Gentle cable laying by means of rollers. Ideal when using hydraulic hoses with "soft" sheaths

Fixing the dividers in 5 mm steps – Type MC 1300

In the standard version, dividers or the complete divider system (dividers with height separation) can be moved in the cross section.

Fixing profiles can be used to fix the dividers or complete divider systems.

Also best suited for applications where the carrier is rotated through 90° with extreme transverse accelerations (fixable dividers for stay variant RMF/RMS).

If the fixed installation version is required, please state this when placing your order.

■ Secure seating of the dividers due to fixing on both sides.

■ The fixing profiles are simply pushed into the stays (RMF).

Gliding elements – the economical solution for gliding applications

Replaceable glide shoes made of plastic*

To extend the life of cable carriers in gliding operations KABELSCHLEPP supplies detachable, exchangeable glide shoes.

Replaceable glide shoes are a very economical solution. When wear occurs only the glide shoes are replaced, and not the complete cable carrier. For travel speeds > 2.5 m/s and large additional loads, a highly wear-resistant special material is used.

For types MC 0950 and 1250 **OFFROAD glide shoes** with 80 % greater wear volumes are also available. We recommend their use in extreme environmental conditions (with particularly abrasive materials such as e.g. sand, dust, corundum).

* Not for MC 0320

Chain height with glide shoes:

MC 0650:	$h_G' = h_G + 3.2 =$	60.2
MC 0950:	$h_G' = h_G + 3.5 =$	83.5
MC 1250:	$h_G' = h_G + 3.5 =$	99.5
MC 1300:	$h_G' = h_G + 7.0 =$	127.0

Dimensions in mm

Minimum bend radii when using glide shoes:

MC 0650:	$KR_{min} =$	95 mm
MC 0950:	$KR_{min} =$	140 mm
MC 1250:	$KR_{min} =$	180 mm
MC 1300:	$KR_{min} =$	195 mm

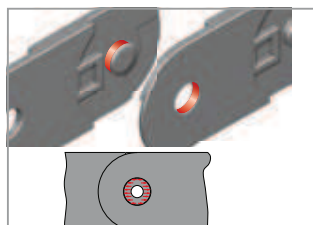

! By means of a positive snap connection, the glide shoes sit firmly on the chain link.

Minimized hinge wear owing to the "life extending 2 disc principle"

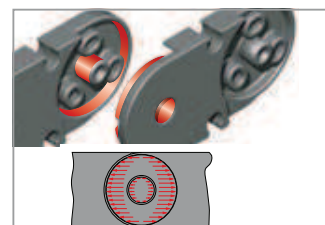

In the M Series*, the push and pull forces are transmitted via the optimum link design for this purpose.

As a result link wear is reduced to a minimum and the life of the cable carrier is considerably lengthened.

* not for type 0320

Types ME 0320, MK 0475, ME/MK 0650, 0950, 1250

Fixing the dividers

In the standard version, dividers or the complete divider system (dividers with height separation) can be moved in the cross section.
(Mounting version A)

However, it is often also possible to fix dividers or complete divider systems (dividers with height separation) by turning the stays.
(Mounting version B).

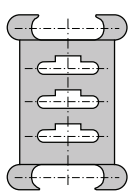

If the fixed mounting version is desired, please state this when placing your order.

Types ME 0320

Mounting version A (standard)

Movable divider:

Divider without arresting cams

Caution: With type ME 0320, the stay does not have a groove. Different dividers are required for mounting versions A and B:

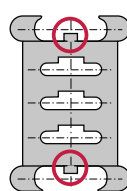

Version A: Dividers **without** arresting cams

Version B: Dividers **with** arresting cams

Mounting version B

Fixed divider:

Divider with arresting cams

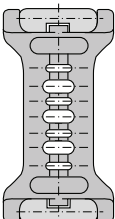

Thus, with type ME 0320, the mounting version A **cannot** be changed into mounting version B simply by turning the stay.

Types MK 0475, ME/MK 0650, 0950 and 1250

Mounting version A (standard)

Movable divider:

The arresting cam of the divider can move in the groove of the stay.

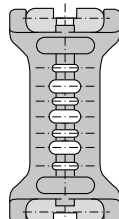

With a movable assembly of the dividers (mounting version A), the holes in the stay do not have any function and hence the dimension a_x -section is meaningless.

Mounting version B

Fixed divider:

The arresting cam of the divider is fixed in the borehole of the stay.

Please note that the dividers can only be fixed in positions at which there is a hole in the stay. The dimension a_x -section specifies the hole intervals in the stay.

Hole intervals = fixing positions of the dividers (a_x -sections)

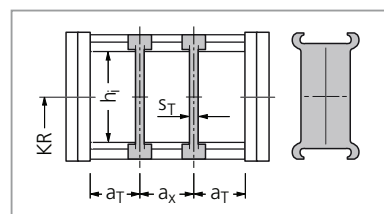

By simply turning the stays, it is also possible at any subsequent time to switch between movable and fixed assembly of the dividers (not in case of ME 0320).

Divider system TS 3

ME/MK 0650, 0950 and 1250 with section subdivision, partitions made of plastic

The dividers for divider system TS 3 do not have any arresting cams. Thus, no mounting version B (fixed mounting) is possible.

* When using plastic partitions

The dividers are fixed by the partitions, the complete divider system is movable.

In the standard version, the divider systems are mounted on every second chain link.

Divider system TS 2 with fixable dividers (mounting version B) and aluminum height subdivisions in 1 mm width sections is available. Please do get in touch with us.

When using **partitions with a_x > 112 mm** there should be an additional central support with a **twin divider**.

Thickness of the twin dividers: ME/MK 0650 S_T = 3 mm, ME/MK 0950, 1250 S_T = 4 mm

Twin dividers are designed for subsequent fitting in the partition system.

Gliding elements – the economical solution for gliding applications

Replaceable glide shoes made of plastic*

To extend the life of cable carriers in gliding operations KABELSCHLEPP supplies detachable, exchangeable glide shoes.

Replaceable glide shoes are a very economical solution. When wear occurs only the glide shoes are replaced, and not the complete cable carrier. For travel speeds > 2.5 m/s and large additional loads, a highly wear-resistant special material is used.

For types ME/MK 0950 and 1250 **OFFROAD glide shoes** with 80 % greater wear volumes are also available. We recommend their use in extreme environmental conditions (with particularly abrasive materials such as e.g. sand, dust, corundum).

* Not for ME 0320

Chain height with glide shoes:

MK 0475: $h_G' = h_G + 2.5 = 41.5$
ME/MK 0650: $h_G' = h_G + 3.2 = 60.2$
ME/MK 0950: $h_G' = h_G + 3.5 = 83.5$
ME/MK 1250: $h_G' = h_G + 3.5 = 99.5$

Dimensions in mm

Minimum bend radii when using glide shoes:

MK 0475:
 KR_{min} = 100 mm
ME/MK 0650:
 KR_{min} = 95 mm
ME/MK 0950:
 KR_{min} = 140 mm
ME/MK 1250:
 KR_{min} = 180 mm

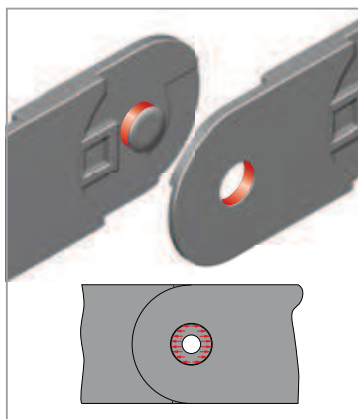

! By means of a positive snap connection, the glide shoes sit firmly on the chain link.

Minimized hinge wear owing to the "life extending 2 disc principle"

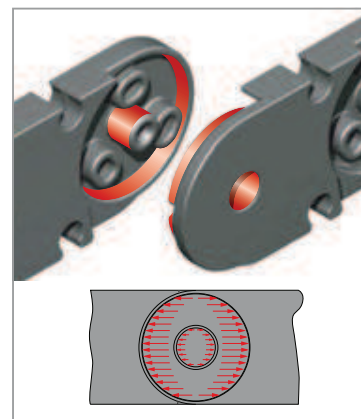

In the M Series*, the push and pull forces are transmitted via the optimum link design for this purpose.

As a result link wear is reduced to a minimum and the life of the cable carrier is considerably lengthened.

* not for type 0320
